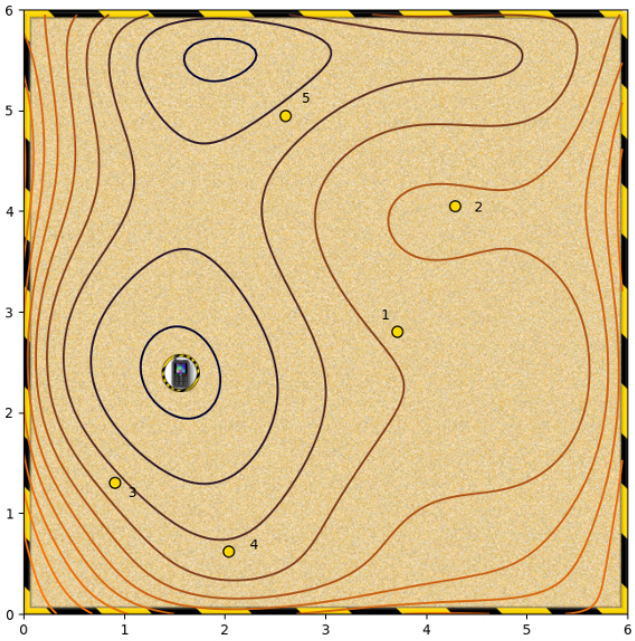
1. Given the following contour plot,

1 / 1 point



Which starting points (from 1 to 5) are likely to converge to the global minimum (shown by the mobile phone) when using a steepest descent algorithm?

- [x] Starting point 1

Correct
In this case, the algorithm descends smoothly down the slope.

- [ ] Starting point 2
- [x] Starting point 3

Correct
In this case, the algorithm descends smoothly down the slope.

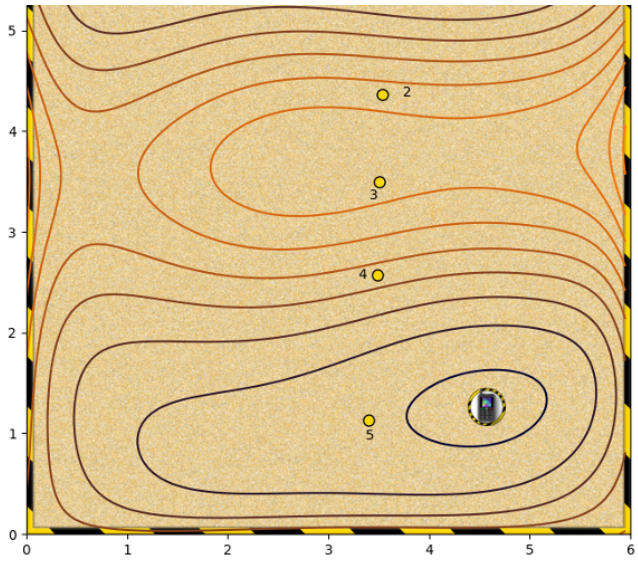
- [x] Starting point 4

Correct
In this case, the algorithm descends smoothly down the slope.

- [ ] Starting point 5
- [ ] None of the above

2. Again, which starting points converge to the global minimum?

1 / 1 point



- [ ] Starting point 1
- [ ] Starting point 2
- [x] Starting point 3

Correct
This should converge to the global minimum.

- [x] Starting point 4

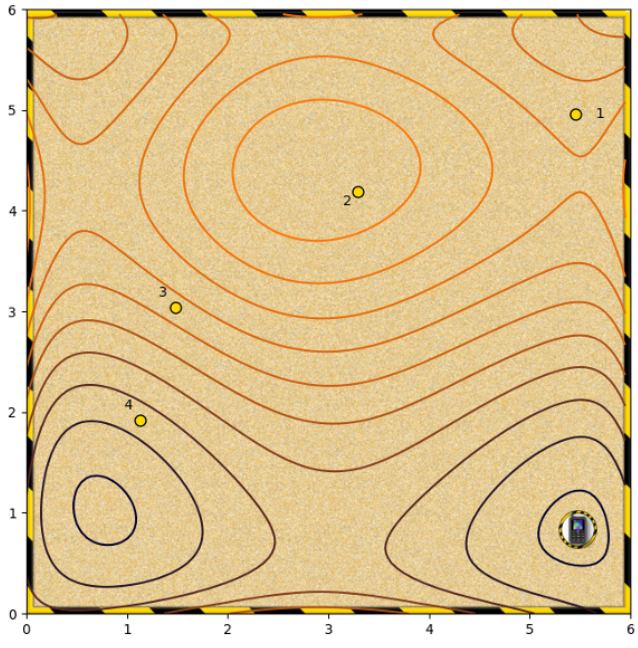
Correct
This should converge to the global minimum.

- [x] Starting point 5

Correct
This should converge to the global minimum.

- [ ] None of the above

3. Which starting points converge to the global minimum? **0 / 1 point**



- [ ] Starting point 1
- [x] Starting point 2

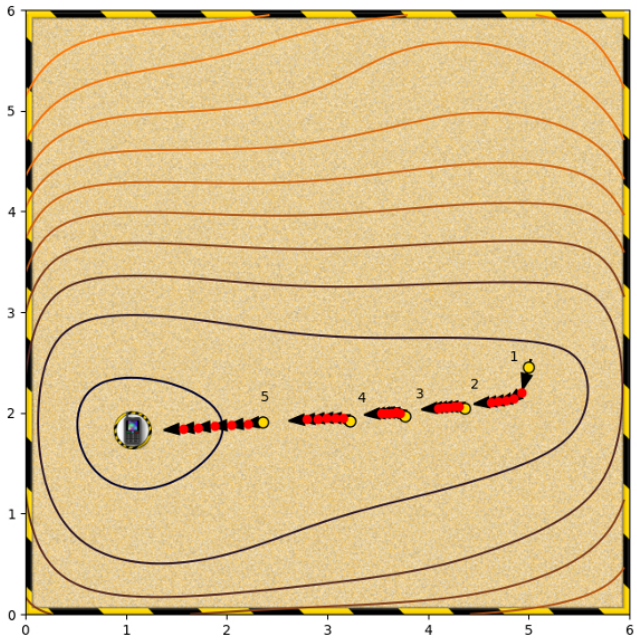
Correct
From here, the algorithm will descend the hill to the global minimum.

- [x] Starting point 3

This should not be selected
This point will converge to a local minimum in the bottom left.

- [ ] Starting point 4
- [ ] None of the above

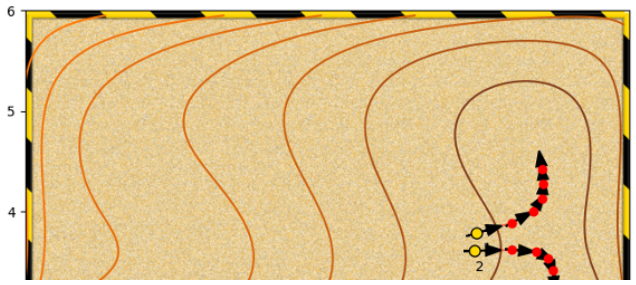
4. What's happening in this gradient descent? **1 / 1 point**

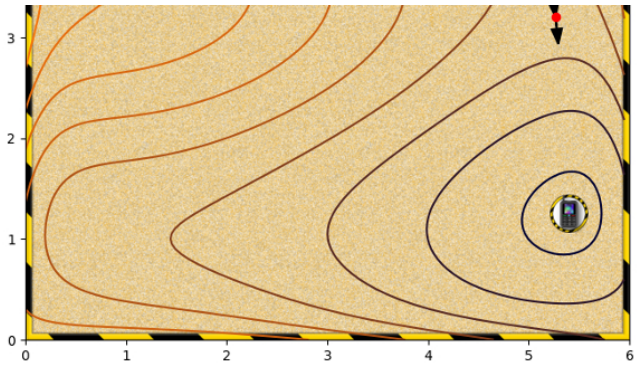


- (•) The global minimum is in a wide and flat basin, so convergence is slow.
- ( ) The algorithm is getting stuck near local minima.
- ( ) None of the other options.
- ( ) The algorithm is getting stuck near saddle points.

Correct
This could be improved by increasing the aggression.

5. What is happening here? **1 / 1 point**

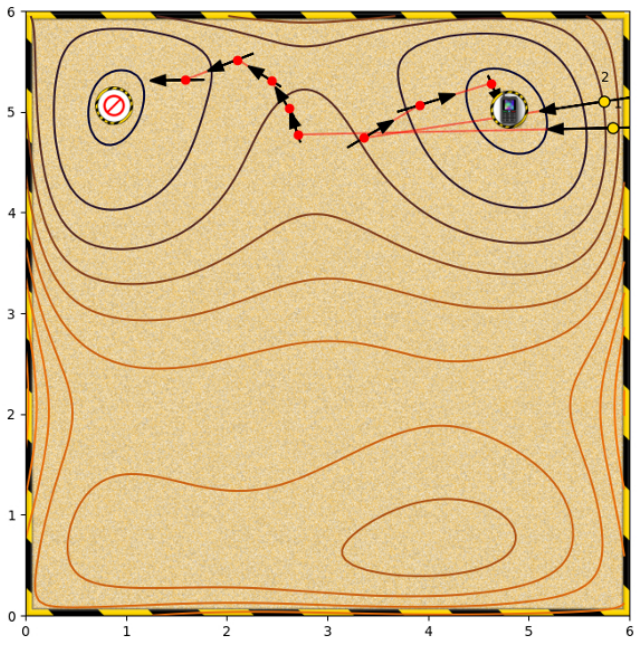




- (●) The algorithm is passing either side of a saddle point.
- ( ) The algorithm is passing either side of a local minimum.
- ( ) There is noise in the system.
- ( ) None of the other options.
- ( ) The algorithm is passing either side of a local maximum.

✓ **Correct**

6. What is happening here? **1 / 1 point**



- ( ) None of the other options.
- ( ) There is noise in the system
- ( ) The marked points are saddle points.
- (●) The Jacobian at the starting point is very large.

✓ **Correct**

This is causing the algorithm to overshoot. In one case into a different basin.
